## Tech commentaries:

No changes to the price of **Ascent Capital Group** stock on the last trading day (Tuesday, 24th Sep 2019). During the last trading day the stock fluctuated **0%** from a day low at **\$0.82** to a day high of **\$0.82**. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

The stock lies the upper part of a very wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **\$0.98** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Due to the high volatility and the trend direction we are not able to give forecast range for this stock.

The **Ascent Capital Group** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$0.82** and **\$0.82**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, September 23, 2019**, and so far it has fallen 0%. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

**Ascent Capital Group** finds support from accumulated volume at \$0.80 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$0.85**, **\$0.92** and **\$0.93**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock During the last day, the stock moved **\$0** between high and low, or **0%**. For the last week the stock has had daily average volatility of **0%**

**Ascent Capital Group** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

Risk: **Low**

Evaluation: **Sell Candidate**
