Tech commentaries:

The **Caledonia Mining Corp** stock price gained **2.31%** on the last trading day (Friday, 19th Apr 2024), rising from **\$9.95** to **\$10.18**. During the last trading day the stock fluctuated **3.45%** from a day low at **\$9.85** to a day high of **\$10.19**. The price has been going up and down for this period, and there has been a -6.69% loss for the last 2 weeks. Volume fell on the last day by **-36 thousand** shares and in total, **34** thousand shares were bought and sold for approximately **\$346.80** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Caledonia Mining Corp** stock with a 90% probability to be traded between \$9.78 and \$11.54 at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

A buy signal was issued from a pivot bottom point on **Thursday, April 18, 2024**, and so far it has risen 2.31%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Caledonia Mining Corp** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$10.47** and **\$10.66**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

Caledonia Mining Corp finds support from accumulated volume at \$9.95 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$10.19**, **\$10.83** and **\$11.36**.

This stock has average movements during the day, but be aware of low or falling volume as this increases the risk. During the last day, the stock moved **\$0.340** between high and low, or **3.45%**. For the last week the stock has had daily average volatility of **4.45%**.

Caledonia Mining Corp holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: **Medium**

Evaluation: **Hold/Accumulate**
