Tech commentaries:

Dun & Bradstreet Corporation (The) gained 0.11% in the last trading day, rising from **\$144.46** to **\$144.62**. The price has risen in 6 of the last 10 days and is up by 0.91% over the past 2 weeks. Volume has increased in the last day along with the price, which is a positive technical sign, and, in total, 100 643 more shares were traded than the day before. In total, **625 210** shares bought and sold for approximately **\$90.42** million.

Dun & Bradstreet Corporation (The) is the upper part of a narrow and horizontal trend and normally this would pose a good selling opportunity, but a break-up through the top trend line at **\$144.85** will give a strong buy signal and a trend shift may be expected. Given the current horizontal trend you can expect **Dun & Bradstreet Corporation (The)** with 90% probability to be traded between **\$142.79** and **\$146.69** at the end of this period with 90% probability. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the roof. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

Only positive signals in the chart today. **Dun & Bradstreet Corporation (The)** holds buy signals from both short- and long-term moving averages. In addition, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down there will be some support from the lines at **\$144.11** and **\$143.31**. A break down below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on Monday December 24, 2018, which indicates further gains until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal.

The stock holds a RSI14 at 76 and is currently being overbought on RSI. This does not have to be a sales signal as many stocks may go both long and hard while being overbought on the RSI. It is therefore important to evaluate the history of the share as it may tell you something about the RSI-sensitiveness.

Dun & Bradstreet Corporation (The) finds support from accumulated volume at **\$144.46**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock is usually traded at good volume, and with minor daily changes the risk is considered to be low. During the last day, the stock moved **\$0.28 (0.20%)** between high and low. For the last week, the stock has had a daily average volatility of **0.19%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for this stock to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
