The Hain Celestial Group is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **The Hain Celestial Group** with a 90% probability to be traded between \$19.06 and \$23.30 at the end of this period with 90% probability. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the roof. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

Only positive signals in the chart today. **The Hain Celestial Group** holds buy signals from both short- and long-term moving averages. In addition, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down there will be some support from the lines at **\$21.70** and **\$21.43**. A break down below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Thursday August 15, 2019**, which indicates further gains until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal.
