Tech commentaries:

The **Pimco Corporate & Income Opportunity** stock price gained **0.0730%** on the last trading day (Friday, 19th Apr 2024), rising from **\$13.70** to **\$13.71**. It has now gained 4 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **0.476%** from a day low at **\$13.66** to a day high of **\$13.73**. The price has fallen in 5 of the last 10 days and is down by **-8.9%** for this period. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **150 thousand** more shares were traded than the day before. In total, **691 thousand** shares were bought and sold for approximately **\$9.47 million**.

The stock lies in the lower part of a wide and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$13.54** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **5.05%** during the next 3 months and, with a 90% probability hold a price between **\$14.22** and **\$15.92** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Monday, April 15, 2024**, and so far it has risen 1.63%. Further rise is indicated until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Pimco Corporate & Income Opportunity** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$13.75** and **\$14.49**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

Pimco Corporate & Income Opportunity finds support from accumulated volume at **\$13.66** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$14.13**, **\$14.21** and **\$14.95**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **\$0.0650** between high and low, or **0.476%**. For the last week, the stock has had daily average volatility of **1.97%**.

The **Pimco Corporate & Income Opportunity** stock holds several negative signals and despite the positive trend, we believe **Pimco Corporate & Income Opportunity** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this stock.

Risk: **Medium**

Evaluation: **Sell Candidate**
