Tech commentaries:

The **Sareum Holdings Plc** stock price gained **30.49%** on the last trading day (Thursday, 18th Apr 2024), rising from **£20.50** to **£26.75**. It has now gained 6 days in a row. It is not often that stocks manage to gain so many days in a row, and falls for a day or two should be expected. During the last trading day the stock fluctuated **44.25%** from a day low at **£20.45** to a day high of **£29.50**. The price has risen in 8 of the last 10 days and is up by **154.76%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **5 million** more shares were traded than the day before. In total, **8 million** shares were bought and sold for approximately **£219.34** million.

Given the current short-term trend, the stock is expected to fall **-61.56%** during the next 3 months and, with a 90% probability hold a price between **£1.02** and **£10.28** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **Sareum Holdings Plc** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **£17.00** and **£21.09**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Wednesday, April 03, 2024**, and so far it has risen 160.98%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

On the downside, the stock finds support just below today's level from accumulated volume at **£22.50** and **£21.50**. On the upside the stock meets some resistance just above today's level from accumulated volume at **£27.50**, **£30.00** and **£32.50**.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **£9.05** between high and low, or **44.25%**. For the last week, the stock has had daily average volatility of **20.89%**.

Sareum Holdings Plc holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Very High**

Evaluation: **Hold/Accumulate**
