## Tech commentaries:

The **Taro Pharmaceutical Industries Ltd** stock price fell by **-0.166%** on the last day (Tuesday, 16th Apr 2024) from **\$42.12** to **\$42.05**. During the last trading day the stock fluctuated **0.512%** from a day low at **\$42.03** to a day high of **\$42.25**. The price has fallen in 5 of the last 10 days and is down by **-0.19%** for this period. Volume has increased on the last day by **8 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **21** thousand shares were bought and sold for approximately **\$867.91** thousand.

The stock is moving within a horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Taro Pharmaceutical Industries Ltd** stock with a 90% probability to be traded between **\$40.26** and **\$42.36** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are few to no technical positive signals at the moment. The **Taro Pharmaceutical Industries Ltd** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$42.09** and **\$42.08**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Thursday, March 28, 2024**, and so far it has fallen **-0.685%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Taro Pharmaceutical Industries Ltd** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

**Taro Pharmaceutical Industries Ltd** finds support from accumulated volume at **\$41.98** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$42.13**, **\$42.23** and **\$42.34**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.215** between high and low, or **0.512%**. For the last week the stock has had daily average volatility of **0.503%**.

**Taro Pharmaceutical Industries Ltd** holds several negative signals and is within a falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
