## Tech commentaries:

**White Mountains Insurance Group Ltd** fell by **-0.80%** in the last day ( Friday, 19th Jul 2019 ) from **\$1 051.43** to **\$1 043.00** During the day the stock fluctuated **1.72%** from a day low at **\$1 042.11** to a day high of **\$1 060.00**. The price has fallen in 6 of the last 10 days and is down by **-1.56%** for this period. Volume fell in the last day along with the stock, which is actually a good sign as volume should follow the stock. In the last day the trading volume fell by **-10 452** shares and in total **11 852** shares bought and sold for approximately **\$12.36** million.

**White Mountains Insurance Group Ltd** has broken the narrow and strong rising short-term trend down. This signalize a slower rising rate, but may also be an early warning about a possible trend shift. Due to trend being broken there will now be resistance at the bottom line of the trend at **\$1 045.46**. A reaction back to this level may hold a second chance to get out before further falls.

**White Mountains Insurance Group Ltd** holds a sales signal from the short-term moving average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock. On further gains, the stock will meet resistance from the short-term moving average at approximately **\$1 043.81**. On a fall, the stock will find some support from the long-term average at approximately **\$1 024.09**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sales signal. A buy signal was issued from a pivot bottom point on **Tuesday July 16, 2019**, which indicates further gains until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements.

RSI14 is **61** and the stock is currently not being overbought or oversold

**White Mountains Insurance Group Ltd** finds support from accumulated volume at \$1 030.41. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$1 043.90**, **\$1 052.20** and **\$1 059.66**.

This stock is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the stock moved **\$17.89 (1.72%)** between high and low. For the last week, the stock has had daily average volatility of **1.35%**.

Several short-term signals, along with a general good trend, are positive and we conclude that the current level may hold a buying opportunity as there is a fair chance for this stock to perform well in the short-term. Due to some small weaknesses in the technical picture we have downgraded our recommendation for this stock since last evaluation from a Strong Buy Candidate to a Buy Candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
