Tech commentaries:

The **IBOVESPA** index price gained **0.0553%** on the last trading day (Tuesday, 2nd Jul 2024), rising from **R\$124,718.07** to **R\$124,787.08**. During the last trading day the index fluctuated **0.95%** from a day low at **R\$124,310.24** to a day high of **R\$125,490.73**. The price has risen in 6 of the last 10 days and is up by **3.76%** over the past 2 weeks.

The index lies the upper part of a falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **R\$125,657.68** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Given the current short-term trend, the index is expected to fall **-4.88%** during the next 3 months and, with a 90% probability hold a price between **R\$112,486.29** and **R\$119,521.07** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **IBOVESPA** index holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **R\$123,661.49** and **R\$122,333.25**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Tuesday, June 18, 2024**, and so far it has risen 4.74%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

IBOVESPA finds support from accumulated volume at **R\$124,729.40** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the index meets some resistance just above today's level from accumulated volume at **R\$125,124.00**, **R\$126,795.41** and **R\$127,599.57**.

In general the index tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the index During the last day, the index moved **R\$1,180.49** between high and low, or **0.95%**. For the last week the index has had daily average volatility of **0.90%**

IBOVESPA holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: Low

Evaluation: Hold/Accumulate
