Tech commentaries:

The **Guangxi Hechi Chemical Co Ltd** stock price fell by **-1.50%** on the last day (Tuesday, 30th Apr 2024) from **¥3.33** to **¥3.28**. During the last trading day the stock fluctuated **7.35%** from a day low at **¥3.13** to a day high of **¥3.36**. The price has fallen in 6 of the last 10 days but is still up by **7.54%** over the past 2 weeks. Volume has increased on the last day by **1 million** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **13 million** shares were bought and sold for approximately **¥43.05 million**.

The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-2.92%** during the next 3 months and, with a 90% probability hold a price between **¥2.61** and **¥3.89** at the end of this 3-month period.

There are mixed signals in the stock today. The **Guangxi Hechi Chemical Co Ltd** stock holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the stock giving a more negative forecast for the stock. On further gains, the stock will meet resistance from the long-term Moving Average at **¥3.58**. On a fall, the stock will find some support from the short-term average at **¥3.07**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely. A buy signal was issued from a pivot bottom point on **Monday, April 22, 2024**, and so far it has risen 17.14%. Further rise is indicated until a new top pivot has been found.

On the downside, the stock finds support just below today's level from accumulated volume at **¥3.01** and **¥2.86**. On the upside the stock meets some resistance just above today's level from accumulated volume at **¥3.39**, **¥3.64** and **¥3.74**.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **¥0.230** between high and low, or **7.35%**. For the last week, the stock has had daily average volatility of **5.99%**.

Guangxi Hechi Chemical Co Ltd holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

Risk: Very High

Evaluation: Sell Candidate
