## Tech commentaries:

The **Yunnan Yuntou Ecology and Env Tech CoLtd** stock price gained **0.167%** on the last trading day (Friday, 17th May 2024), rising from **¥5.98** to **¥5.99**. It has now gained 4 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **3.45%** from a day low at **¥5.80** to a day high of **¥6.00**. The price has risen in 5 of the last 10 days and is up by **2.04%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **591 thousand** more shares were traded than the day before. In total, **1 million** shares were bought and sold for approximately **¥7.80** million.

The stock lies the upper part of a very wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **¥6.06** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Given the current short-term trend, the stock is expected to fall **-24.16%** during the next 3 months and, with a 90% probability hold a price between **¥3.61** and **¥4.59** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Monday, April 22, 2024**, and so far it has risen 13.45%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Yunnan Yuntou Ecology and Env Tech CoLtd** stock holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the stock giving a more negative forecast for the stock. On further gains, the stock will meet resistance from the long-term Moving Average at **¥6.25**. On a fall, the stock will find some support from the short-term average at **¥5.88**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal.

**Yunnan Yuntou Ecology and Env Tech CoLtd** finds support from accumulated volume at **¥5.87** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance from accumulated volume at **¥6.92**, **¥7.14** and **¥7.40**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **¥0.200** between high and low, or **3.45%**. For the last week, the stock has had daily average volatility of **3.96%**.

**Yunnan Yuntou Ecology and Env Tech CoLtd** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.
