It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **2.46%** from a day low at **¥2.84** to a day high of **¥2.91**. The price has risen in 7 of the last 10 days and is up by **2.46%** over the past 2 weeks. The stock has broken the weak rising the short-term trend up and an even stronger rate of rising is indicated. For any reaction back there will now be support on the roof on the current trend broken at **¥2.89**, a level that may pose a second chance to hit a runner. According to fan-theory **¥3.08** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

Mostly positive signals in the chart today. The **Qingdao Rural Commercial Bank Corp** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

On the downside, the stock finds support just below today's level from accumulated volume at **¥2.75** and **¥2.72**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.
