Tech commentaries:

The **Vanke Overseas Investment Holding Co Ltd** stock price gained **1.44%** on the last trading day (Friday, 31st May 2024), rising from **HK\$1.39** to **HK\$1.41**. During the last trading day the stock fluctuated **0%** from a day low at **HK\$1.41** to a day high of **HK\$1.41**. The price has been going up and down for this period, and there has been a **-0.7%** loss for the last 2 weeks. Volume fell on the last day by **-20 thousand** shares and in total, **10 thousand** shares were bought and sold for approximately **HK\$14.10** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock is at the upper part of a wide and horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **HK\$1.44** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Vanke Overseas Investment Holding Co Ltd** stock with a 90% probability to be traded between **HK\$1.15** and **HK\$1.43** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Vanke Overseas Investment Holding Co Ltd** stock holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock giving a positive forecast for the stock. On further gains, the stock will meet resistance from the short-term Moving Average at approximately **HK\$1.42**. On a fall, the stock will find some support from the long-term average at approximately **HK\$1.34**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, April 30, 2024**, and so far it has fallen **-2.76%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may not be. The very low volume increases the risk and reduces the other technical signals issued.

Vanke Overseas Investment Holding Co Ltd finds support from accumulated volume at **HK\$1.40** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **HK\$1.42**, **HK\$1.45** and **HK\$1.46**.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **HK\$0** between high and low, or **0%**. For the last week the stock has had daily average volatility of **1.32%**.

Vanke Overseas Investment Holding Co Ltd holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a
