Tech commentaries:

The **Leverage Shares 3x Long Nio Etc** ETF price fell by **-4.03%** on the last day (Friday, 28th Jun 2024) from **0.246€** to **0.236€**. During the last trading day the ETF fluctuated **0%** from a day low at **0.236€** to a day high of **0.236€**. The price has risen in 5 of the last 10 days but is still down by **-8.14%** for this period. Volume has increased on the last day by **2** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **22** thousand shares were bought and sold for approximately **5.09€** thousand.

The ETF lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the ETF is expected to fall **-46.49%** during the next 3 months and, with a 90% probability hold a price between **0.0922€** and **0.146€** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Friday, June 21, 2024**, and so far it has risen 1.90%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Leverage Shares 3x Long Nio Etc** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **0.239€** and **0.308€**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Leverage Shares 3x Long Nio Etc** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

Leverage Shares 3x Long Nio Etc finds support from accumulated volume at 0.233€ and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **0.240€**, **0.246€** and **0.251€**.

This ETF may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this ETF is considered to be "very high risk". During the last day, the ETF moved **0€** between high and low, or **0%**. For the last week, the ETF has had daily average volatility of **1.19%**.

Leverage Shares 3x Long Nio Etc holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: Very High

Evaluation: Hold/Accumulate
