Tech commentaries:

The **Yahoo Japan Corporation** stock price fell by **-1.68%** on the last day (Thursday, 2nd May 2024) from **JP¥380.30** to **JP¥373.90**. During the last trading day the stock fluctuated **1.85%** from a day low at **JP¥373.90** to a day high of **JP¥380.80**. The price has risen in 6 of the last 10 days and is up by **10.07%** over the past 2 weeks. Volume has increased on the last day by **3 million** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **13 million** shares were bought and sold for approximately **JP¥5.01 billion**.

The stock lies the upper part of a wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at **JP¥384.81** will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Given the current short-term trend, the stock is expected to fall **-17.85%** during the next 3 months and, with a 90% probability hold a price between **JP¥267.42** and **JP¥316.12** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Wednesday, April 17, 2024**, and so far it has risen 10.07%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Yahoo Japan Corporation** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **JP¥374.74** and **JP¥376.80**. A break-up above any of these levels will issue buy signals. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

On the downside, the stock finds support just below today's level from accumulated volume at **JP¥349.00** and **JP¥347.50**. On the upside the stock meets some resistance just above today's level from accumulated volume at **JP¥376.30**, **JP¥390.30** and **JP¥433.30**.

This stock has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the stock moved **JP¥6.90** between high and low, or **1.85%**. For the last week, the stock has had daily average volatility of **1.72%**.

Yahoo Japan Corporation holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: Medium
