The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-21.86%** during the next 3 months and, with a 90% probability hold a price between **\$0.0000058** and **\$0.0000373** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Tuesday, May 14, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the stock should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued. Despite all the positive signals in the chart we there to be so much uncertainty and risk that we cannot upgrade this stock's score yet.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.
