Tech commentaries:

No changes to the price of **88 Energy Limited** stock on the last trading day (Friday, 17th May 2024). During the last trading day the stock fluctuated **33.33%** from a day low at **\$0.0030** to a day high of **\$0.0040**. The price has fallen in 4 of the last 10 days and is down by **-25%** for this period.

The stock lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-32.80%** during the next 3 months and, with a 90% probability hold a price between **\$0.0016** and **\$0.0038** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume gained on the last day while the price remained unchanged. This is not a classical divergence, but the stock should be watched more closely at it may be a "turning point". The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **88 Energy Limited** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.0033** and **\$0.0045**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Tuesday, May 14, 2024**, and so far it has fallen - 25.00%. Further fall is indicated until a new bottom pivot has been found.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **\$0.0010** between high and low, or **33.33%**. For the last week, the stock has had daily average volatility of **26.67%**.

88 Energy Limited holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this stock.

Risk: Very High

Evaluation: Strong Sell Candidate
