Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **Arca Continental, S.A.B. de C.V.** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. A buy signal was issued from a pivot bottom point on **Tuesday, May 28, 2024**, and so far it has risen 6.98%. Further rise is indicated until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).
