Tech commentaries:

The **Aegon NV** ETF price fell by **-0.0400%** on the last day (Friday, 13th Dec 2019) from **$25.00** to **$24.99**. During the last trading day the ETF fluctuated **0.0400%** from a day low at **$24.99** to a day high of **$25.00**. The price has been going up and down for this period, and there has been a -2.65% loss for the last 2 weeks. Volume has increased on the last day by **200** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **48** thousand shares were bought and sold for approximately **$1.20** million.

The ETF lies in the lower of a narrow and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at $24.93 is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the ETF is expected to fall **-3.07%** during the next 3 months and, with a 90% probability hold a price between **$24.16** and **$24.91** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Monday, December 09, 2019**, and so far it has risen 0.0400%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Aegon NV** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **$25.18** and **$25.57**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Aegon NV** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs".

Aegon NV finds support from accumulated volume at $24.98 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **$25.55**, **$26.00** and **$26.03**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **$0.0100** between high and low, or **0.0400%**. For the last week the ETF has had daily average volatility of **0.0640%**.

Aegon NV holds several negative signals and is within a narrow and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
