Volume fell on the last day by **-20 thousand** shares and in total, **40 thousand** shares were bought and sold for approximately **\$2.40** million. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock lies in the middle of a wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **37.10%** during the next 3 months and, with a 90% probability hold a price between **\$72.99** and **\$85.89** at the end of this 3-month period.

The **Argan Inc** stock holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock giving a positive forecast for the stock. On further gains, the stock will meet resistance from the short-term Moving Average at approximately **\$61.24**. On a fall, the stock will find some support from the long-term average at approximately **\$54.43**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The stock should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, April 29, 2024**, and so far it has fallen **-2.83%**. Further fall is indicated until a new bottom pivot has been found.

Argan Inc finds support from accumulated volume at **\$59.77** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$61.21**, **\$61.22** and **\$61.64**.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **\$0.665** between high and low, or **1.11%**. For the last week, the stock has had daily average volatility of **1.74%**.

Several short-term signals, along with a general good trend, are positive and we conclude that the current level may hold a buying opportunity as there is a fair chance for **Argan Inc** stock to perform well in the short-term.
