Tech commentaries:

The **American Century Select High Yield Etf** ETF price gained **0.0331%** on the last trading day (Thursday, 27th Jun 2024), rising from **\$45.32** to **\$45.34**. During the last trading day the ETF fluctuated **0.199%** from a day low at **\$45.28** to a day high of **\$45.37**. The price has risen in 6 of the last 10 days but is still down by **-0.1%** for this period. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **1 thousand** more shares were traded than the day before. In total, **1 thousand** shares were bought and sold for approximately **\$62.74** thousand.

The ETF has broken the narrow and horizontal trend down. Breaks like this are often followed by swift and strong movements, and any correction down to the breakline at approximately **\$45.35** is considered to be a "second chance" to get out before further fall. It is, however, important to note that false breaks may appear and that the price may move back into the horizontal trend. A break on increasing volume is considered to be more significant and reliable than breaks on low volume.

Mostly positive signals in the chart today. The **American Century Select High Yield Etf** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **\$45.37**. On a fall, the ETF will find some support from the long-term average at approximately **\$45.26**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. A buy signal was issued from a pivot bottom point on **Friday, June 14, 2024**, and so far it has risen **0.182%**. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **American Century Select High Yield Etf** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued.

American Century Select High Yield Etf finds support from accumulated volume at **\$45.25** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$45.37**, **\$45.39** and **\$45.43**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.0899** between high and low, or **0.199%**. For the last week the ETF has had daily average volatility of **0.129%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **American Century Select High Yield Etf** ETF to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
