## Tech commentaries:

The **Amines & Plasticizers Ltd** stock price fell by **-7.73%** on the last day (Friday, 28th Jun 2024) from **299.67** to **276.50**. During the last trading day the stock fluctuated **9.56%** from a day low at **272.90** to a day high of **299.00**. The price has been going up and down for this period, and there has been a 23.04% gain for the last 2 weeks. Volume fell on the last day along with the stock, which is actually a good sign as volume should follow the stock. On the last day, the trading volume fell by **-994 thousand** shares and in total, **189** thousand shares were bought and sold for approximately **752.36** million.

The stock lies in the middle of a wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **51.00%** during the next 3 months and, with a 90% probability hold a price between **379.93** and **458.95** at the end of this 3-month period.

The **Amines & Plasticizers Ltd** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **269.43** and **228.25**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Thursday, June 27, 2024**, and so far it has fallen - 7.73%. Further fall is indicated until a new bottom pivot has been found. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements.

**Amines & Plasticizers Ltd** finds support from accumulated volume at **271.09** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance from accumulated volume at **294.83**, **299.67**.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **26.10** between high and low, or **9.56%**. For the last week, the stock has had daily average volatility of **10.49%**.

**Amines & Plasticizers Ltd** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

**Risk: Very High**

**Evaluation: Hold/Accumulate**
