Tech commentaries:

The **ARbit / US Dollar** cryptocurrency price gained **0.605%** on the last trading day (Thursday, 9th May 2024), rising from **\$1.03** to **\$1.03**. During the last trading day the cryptocurrency fluctuated **3.79%** from a day low at **\$1.01** to a day high of **\$1.05**. The price has fallen in 6 of the last 10 days and is down by **-9.13%** for this period. Volume fell on the last day by **-224 million** shares and in total, **64 million** shares were bought and sold for approximately **\$65.90 million**. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The cryptocurrency lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the cryptocurrency is expected to fall **-47.03%** during the next 3 months and, with a 90% probability hold a price between **\$0.470** and **\$0.716** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

A buy signal was issued from a pivot bottom point on **Wednesday, May 01, 2024**, and so far it has risen 3.66%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day despite gaining prices. This causes a divergence between volume and price and it may be an early warning. The cryptocurrency should be watched closely. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **ARbit / US Dollar** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$1.05** and **\$1.19**. A break-up above any of these levels will issue buy signals.

ARbit / US Dollar finds support from accumulated volume at **\$1.03** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$1.06**, **\$1.07** and **\$1.15**.

This cryptocurrency has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the cryptocurrency moved **\$0.0382** between high and low, or **3.79%**. For the last week, the cryptocurrency has had daily average volatility of **4.98%**.

ARbit / US Dollar holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this cryptocurrency.

Risk: **Medium**

Evaluation: **Sell Candidate**
