Tech commentaries:

The **Argo Group International Holdings, Ltd.** stock price fell by **-0.92%** on the last day (Friday, 28th Jun 2024) from **\$25.13** to **\$24.90**. During the last trading day the stock fluctuated **2.33%** from a day low at **\$24.90** to a day high of **\$25.48**. The price has fallen in 6 of the last 10 days but is still up by **0.2%** over the past 2 weeks. Volume has increased on the last day by **208 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **238 thousand** shares were bought and sold for approximately **\$5.92 million**.

The stock lies in the lower part of a narrow and weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$24.86** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **5.59%** during the next 3 months and, with a 90% probability hold a price between **\$26.25** and **\$26.68** at the end of this 3-month period.

The **Argo Group International Holdings, Ltd.** stock holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the stock giving a positive forecast for the stock. On further gains, the stock will meet resistance from the short-term Moving Average at approximately **\$25.02**. On a fall, the stock will find some support from the long-term average at approximately **\$24.82**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, June 24, 2024**, and so far it has fallen **-1.11%**. Further fall is indicated until a new bottom pivot has been found. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

Argo Group International Holdings, Ltd. finds support from accumulated volume at **\$24.85** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$24.93**, **\$25.00** and **\$25.18**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.580** between high and low, or **2.33%**. For the last week the stock has had daily average volatility of **1.28%**.

Argo Group International Holdings, Ltd. holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
