The stock lies in the upper part of a wide and strong rising trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break-up at the top trend line at kr265.35 will firstly indicate a stronger rate of rising. Given the current short-term trend, the stock is expected to rise 14.30% during the next 3 months and, with a 90% probability hold a price between kr269.47 and kr303.31 at the end of this 3month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on Thursday, May 16, 2024, and so far it has fallen -0.793%. Further fall is indicated until a new bottom pivot has been found. Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.
