Volume fell on the last day by **-1 thousand** shares and in total, **534** shares were bought and sold for approximately **155.93 Fr** thousand. You should take into consideration that falling volume on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The stock lies in the middle of a wide and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **5.55%** during the next 3 months and, with a 90% probability hold a price between **294.49 Fr** and **341.21 Fr** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). The **Banque Cantonale de Genève SA** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **293.86 Fr** and **296.94 Fr**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Monday, April 08, 2024**, and so far it has fallen **-6.71%**. Further fall is indicated until a new bottom pivot has been found. Volume fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

Banque Cantonale de Genève SA finds support from accumulated volume at **290.00 Fr** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **293.00 Fr**, **296.00 Fr** and **300.00 Fr**.
