## Tech commentaries:

No changes to the price of **Bangkok Expressway and Metro Public Co** stock on the last trading day (Friday, 17th May 2024). During the last trading day the stock fluctuated **1.90%** from a day low at **77.90** to a day high of **78.05**. The price has fallen in 4 of the last 10 days and is down by **-3.03%** for this period.

The stock lies in the lower part of a weak rising trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **77.96** is broken, it will firstly indicate a slower rate of rising, but may also be an early warning for a trend shift. Given the current short-term trend, the stock is expected to rise **2.31%** during the next 3 months and, with a 90% probability hold a price between **78.14** and **78.73** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Wednesday, May 15, 2024**, and so far it has risen 0.629%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Bangkok Expressway and Metro Public Co** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **78.09** and **78.18**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell during the last trading day while price remained unchanged. This may be an early warning, but it may also not. We still recommend that you pay attention over the next couple of days.

**Bangkok Expressway and Metro Public Co** finds support from accumulated volume at **77.95** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **78.05**, **78.10** and **78.20**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **70.150** between high and low, or **1.90%**. For the last week the stock has had daily average volatility of **2.27%**.

**Bangkok Expressway and Metro Public Co** holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
