Tech commentaries:
The **Roundhill Sports Betting & iGaming ETF** price gained 1.81% on the last trading day (Monday, 7th Nov 2022), rising from $14.34 to $14.60. During the last trading day the ETF fluctuated 2.90% from a day low at $14.33 to a day high of $14.74. The price has risen in 6 of the last 10 days and is up by 4.73% over the past 2 weeks. **Volume** fell on the last day by -60 thousand shares and in total, 24 thousand shares were bought and sold for approximately $355.10 thousand. You should take into consideration that falling **volume** on higher prices causes divergence and may be an early warning about possible changes over the next couple of days.

The ETF lies the upper part of a very wide and falling trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break up at the top trend line at $14.92 will firstly indicate a slower falling rate, but may be the first sign of a trend shift. Given the current short-term trend, the ETF is expected to fall -17.15% during the next 3 months and, with a 90% probability hold a price between $9.48 and $12.36 at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **Roundhill Sports Betting & iGaming ETF** holds a sell signal from the short-term moving average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term moving average at approximately $14.67. On a fall, the ETF will find some support from the long-term average at approximately $13.89. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. A buy signal was issued from a pivot bottom point on Monday, September 26, 2022, and so far it has risen 13.27%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. **Volume** fell during the last trading day while the price increased. This causes a divergence and may be considered as an early warning, but it may also not.

**Roundhill Sports Betting & iGaming ETF** finds support from accumulated volume at $14.12 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance from accumulated volume at $16.89, $17.18 and $17.63.

This ETF has average movements during the day, but be aware of low or falling volume as this increases the risk. During the last day, the ETF moved $0.415 between high and low, or 2.90%. For the last week the ETF has had daily average volatility of 2.83%.

**Roundhill Sports Betting & iGaming ETF** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Hold/Accumulate candidate.
