## Tech commentaries:

The **Bell Financial Group Limited** stock price gained **0.741%** on the last trading day (Monday, 6th May 2024), rising from **\$1.35** to **\$1.36**. During the last trading day the stock fluctuated **2.99%** from a day low at **\$1.34** to a day high of **\$1.38**. The price has risen in 5 of the last 10 days and is up by **0.74%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **205 thousand** more shares were traded than the day before. In total, **321 thousand** shares were bought and sold for approximately **\$436.45 thousand**.

The stock is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **Bell Financial Group Limited** stock with a 90% probability to be traded between \$1.28 and \$1.41 at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and stocks seldom manage to go directly from the bottom of a trend up to the top. Stocks turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **Bell Financial Group Limited** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$1.35** and **\$1.34**. A breakdown below any of these levels will issue sell signals. **Bell Financial Group Limited** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, April 22, 2024**, and so far it has fallen -1.09%. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

**Bell Financial Group Limited** finds support from accumulated volume at \$1.35 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$1.38**, **\$1.38** and **\$1.42**.

In general the stock tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the stock moved **\$0.0400** between high and low, or **2.99%**. For the last week the stock has had daily average volatility of **1.58%**.

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **Bell Financial Group Limited** stock to perform well in the short-term period.

Risk: **Low**

Evaluation: **Buy Candidate**
