The price has risen in 8 of the last 10 days and is up by **20.88%** over the past 2 weeks. Mostly positive signals in the chart today. The **Macro Bank Inc** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$54.11** and **\$50.48**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Wednesday, April 24, 2024**, and so far it has risen 22.95%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

On the downside, the stock finds support just below today's level from accumulated volume at **\$54.16** and **\$51.74**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.
