Further rise is indicated until a new top pivot has been found. **BNP PARIBAS ORD FF 2** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

On the downside, the stock finds support just below today's level from accumulated volume at **\$60.42** and **\$59.80**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.
