Tech commentaries:

The **Benton Resources Inc.** stock price gained **25.00%** on the last trading day (Tuesday, 25th Jun 2024), rising from **\$0.104** to **\$0.130**. During the last trading day the stock fluctuated **0%** from a day low at **\$0.130** to a day high of **\$0.130**. The price has been going up and down for this period, and there has been a **8.33%** gain for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **5 thousand** more shares were traded than the day before. In total, **5 thousand** shares were bought and sold for approximately **\$650.00**.

The stock lies in the upper part of a very wide and weak rising trend in the short term, and this may normally pose a very good selling opportunity for the short-term trader as reaction back towards the lower part of the trend can be expected. A break-up at the top trend line at **\$0.130** will firstly indicate a stronger rate of rising. Given the current short-term trend, the stock is expected to rise **3.63%** during the next 3 months and, with a 90% probability hold a price between **\$0.0899** and **\$0.135** at the end of this 3-month period.

The **Benton Resources Inc.** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$0.112** and **\$0.109**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Tuesday, June 18, 2024**, and so far it has risen 25.00%. Further rise is indicated until a new top pivot has been found. **Benton Resources Inc.** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

On the downside, the stock finds support just below today's level from accumulated volume at **\$0.110** and **\$0.100**. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **\$0** between high and low, or **0%**. For the last week, the stock has had daily average volatility of **0%**.

Benton Resources Inc. holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: High

Evaluation: Hold/Accumulate
