During the last trading day the stock fluctuated **1.86%** from a day low at **\$57.55** to a day high of **\$58.62**. The price has been going up and down for this period, and there has been a **-1.15%** loss for the last 2 weeks. Volume has increased on the last day by **17 thousand** shares but on falling prices. The stock lies in the middle of a wide and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the stock is expected to fall **-6.29%** during the next 3 months and, with a 90% probability hold a price between **\$52.21** and **\$57.96** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Wednesday, April 17, 2024**, and so far it has risen 2.56%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Bank of Hawaii Corporation** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$58.44** and **\$59.61**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

Bank of Hawaii Corporation finds support from accumulated volume at \$56.56 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$58.41**, **\$59.86** and **\$61.91**.
