## Tech commentaries:

The **SPDR(R) BLOOMBERG BARCLAYS INTERNATIONAL** ETF price gained **0.140%** on the last trading day (Thursday, 27th Jun 2024), rising from **\$21.44** to **\$21.47**. During the last trading day the ETF fluctuated **0.295%** from a day low at **\$21.45** to a day high of **\$21.51**. The price has fallen in 7 of the last 10 days and is down by **-0.83%** for this period. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **26 thousand** more shares were traded than the day before. In total, **165 thousand** shares were bought and sold for approximately **\$3.54** million.

The ETF is moving within a narrow and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **SPDR(R) BLOOMBERG BARCLAYS INTERNATIONAL** ETF with a 90% probability to be traded between \$20.87 and \$21.57 at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners.

A buy signal was issued from a pivot bottom point on **Wednesday, June 26, 2024**, and so far it has risen 0.140%. Further rise is indicated until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. The **SPDR(R) BLOOMBERG BARCLAYS INTERNATIONAL** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$21.57** and **\$21.71**. A break-up above any of these levels will issue buy signals. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

**SPDR(R) BLOOMBERG BARCLAYS INTERNATIONAL** finds support from accumulated volume at \$21.44 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$21.50**, **\$21.69** and **\$22.10**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.0633** between high and low, or **0.295%**. For the last week the ETF has had daily average volatility of **0.296%**.

**SPDR(R) BLOOMBERG BARCLAYS INTERNATIONAL** holds several negative signals and is within a narrow and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
