Tech commentaries:

The **CanYaCoin USD** cryptocurrency price fell by **-1.41%** on the last day (Friday, 28th Jun 2024) from **\$0.0003** to **\$0.0003**. During the last trading day the cryptocurrency fluctuated **2.11%** from a day low at **\$0.0003** to a day high of **\$0.0003**. The price has been going up and down for this period, and there has been a **-3.26%** loss for the last 2 weeks. Volume has increased on the last day by **57** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **125** shares were bought and sold for approximately **\$0.0382**.

The cryptocurrency lies in the middle of a very wide and falling trend in the short term and further fall within the trend is signaled. Due to the high volatility and the trend direction we are not able to give forecast range for this stock.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **CanYaCoin USD** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.0003** and **\$0.0004**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Thursday, April 11, 2024**, and so far it has fallen **-98.44%**. Further fall is indicated until a new bottom pivot has been found. **CanYaCoin USD** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

There is no support from accumulated volume below today's level and given the right condition the cryptocurrency may perform very badly in the next couple of days. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$0.0003**, **\$0.0003** and **\$0.0003**.

This cryptocurrency has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the cryptocurrency moved **\$0.00000643** between high and low, or **2.11%**. For the last week, the cryptocurrency has had daily average volatility of **2.24%**.

CanYaCoin USD holds several negative signals and is within a very wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this cryptocurrency.

Risk: **Medium**

Evaluation: **Strong Sell Candidate**
