Tech commentaries:

The **Ishares Vii Plc -ishares Core Msci Emu** ETF price fell by **-0.313%** on the last day (Tuesday, 25th Jun 2024) from **6.71€** to **6.69€**. During the last trading day the ETF fluctuated **0.0748%** from a day low at **6.69€** to a day high of **6.69€**. The price has been going up and down for this period, and there has been a **-1.07%** loss for the last 2 weeks. Volume has increased on the last day by **6 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **6 thousand** shares were bought and sold for approximately **43.27€** thousand.

The ETF lies in the middle of a narrow and falling trend in the short term and further fall within the trend is signaled. Given the current short-term trend, the ETF is expected to fall **-3.17%** during the next 3 months and, with a 90% probability hold a price between **6.31€** and **6.56€** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

There are mixed signals in the ETF today. The **Ishares Vii Plc -ishares Core Msci Emu** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the long-term average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **6.76€**. On a fall, the ETF will find some support from the short-term average at **6.66€**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **Ishares Vii Plc -ishares Core Msci Emu** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued. A buy signal was issued from a pivot bottom point on **Friday, June 14, 2024**, and so far it has risen 1.61%. Further rise is indicated until a new top pivot has been found.

Ishares Vii Plc -ishares Core Msci Emu finds support from accumulated volume at **6.64€** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **6.83€**, **6.84€** and **6.87€**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **0.0050€** between high and low, or **0.0748%**. For the last week the ETF has had daily average volatility of **0.363%**.

Ishares Vii Plc -ishares Core Msci Emu holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
