Tech commentaries:

The **Capital Group Fixed Income Etf** ETF price fell by **-0.501%** on the last day (Friday, 28th Jun 2024) from **\$25.95** to **\$25.82**. It has now fallen 3 days in a row. During the last trading day the ETF fluctuated **0.89%** from a day low at **\$25.82** to a day high of **\$26.05**. The price has fallen in 5 of the last 10 days and is down by **-0.98%** for this period. Volume fell on the last day along with the ETF, which is actually a good sign as volume should follow the ETF. On the last day, the trading volume fell by **-962 thousand** shares and in total, **172 thousand** shares were bought and sold for approximately **\$4.44 million**.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **2.04%** during the next 3 months and, with a 90% probability hold a price between **\$26.10** and **\$26.73** at the end of this 3-month period.

Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Capital Group Fixed Income Etf** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$26.01** and **\$25.84**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Friday, June 14, 2024**, and so far it has fallen **-1.15%**. Further fall is indicated until a new bottom pivot has been found. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements.

Capital Group Fixed Income Etf finds support from accumulated volume at **\$25.80** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$25.86**, **\$25.95** and **\$25.95**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.230** between high and low, or **0.89%**. For the last week the ETF has had daily average volatility of **0.468%**.

The Capital Group Fixed Income Etf ETF holds several negative signals and despite the positive trend, we believe **Capital Group Fixed Income Etf** will perform weakly in the next couple of days or weeks. Therefore, we hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Sell candidate.

Risk: **Low**

Evaluation: **Sell Candidate**
