## Tech commentaries:

The **Ishares Vii Plc - Ishares Msci Japan** ETF price gained **1.32%** on the last trading day (Friday, 28th Jun 2024), rising from **£194.84** to **£197.41**. During the last trading day the ETF fluctuated **0.89%** from a day low at **£195.85** to a day high of **£197.60**. The price has been going up and down for this period, and there has been a 2.21% gain for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **9 thousand** more shares were traded than the day before. In total, **9 thousand** shares were bought and sold for approximately **£1.75** million.

The ETFs at the upper part of a horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **£197.89** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Ishares Vii Plc - Ishares Msci Japan** ETF with a 90% probability to be traded between **£184.93** and **£195.06** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFS seldom manage to go directly from the bottom of a trend up to the top. ETFS turning up in the middle of a horizontal trend are therefore considered to be potential runners. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

The **Ishares Vii Plc - Ishares Msci Japan** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the ETF has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **£193.67** and **£195.20**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Friday, June 21, 2024**, and so far it has risen 3.73%. Further rise is indicated until a new top pivot has been found. Volume is rising along with the price. This is considered to be a good technical signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD).

**Ishares Vii Plc - Ishares Msci Japan** finds support from accumulated volume at **£196.32** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **£199.46**, **£199.78** and **£201.75**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **£1.75** between high and low, or **0.89%**. For the last week the ETF has had daily average volatility of **0.348%**.

**Ishares Vii Plc - Ishares Msci Japan** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: Low

Evaluation: Hold/Accumulate
