Tech commentaries:

The **Capital Metals Plc** stock price fell by **-29.13%** on the last day (Friday, 28th Jun 2024) from **£2.30** to **£1.63**. During the last trading day the stock fluctuated **12.88%** from a day low at **£1.54** to a day high of **£1.74**. The price has fallen in 7 of the last 10 days and is down by **-59.25%** for this period. Volume has increased on the last day by **8 million** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **8 million** shares were bought and sold for approximately **£13.74 million**.

The stock has broken the very wide and falling short-term trend down. Firstly a stronger fallrate is indicated, but false breaks and "sell-off" may occur. However, a further fall is realistic and any reactions back to the breaking point (**£2.64**) are considered to be a "second chance" to get out. According to the fan-theory **£0.369** will represent the new bottom line of the next trend, but it is far too early to say this for certain.

There are few to no technical positive signals at the moment. The **Capital Metals Plc** stock holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **£3.01** and **£4.26**. A break-up above any of these levels will issue buy signals. A sell signal was issued from a pivot top point on **Tuesday, May 14, 2024**, and so far it has fallen **-69.81%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume rose on falling prices yesterday. This may be an early warning and the stock should be followed more closely.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move very much during the day (volatility) and with a very large prediction interval from the Bollinger Band this stock is considered to be "very high risk". During the last day, the stock moved **£0.198** between high and low, or **12.88%**. For the last week, the stock has had daily average volatility of **18.21%**.

Capital Metals Plc holds several negative signals and this should be a sell candidate, but due to the general chance for a turnaround situation it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. We have upgraded our analysis conclusion for this stock since the last evaluation from a Sell to a Hold/Accumulate candidate.

Risk: Very High

Evaluation: Hold/Accumulate
