Tech commentaries:

No changes to the price of Cell MedX Corp. stock on the last trading day (Wednesday, 26th Jun 2024). During the last trading day the stock fluctuated 0% from a day low at \$0.0430 to a day high of \$0.0430. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

The stock lies in the middle of a very wide and strong rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise 34.25% during the next 3 months and, with a 90% probability hold a price between \$0.0385 and \$0.0796 at the end of this 3-month period.

The Cell MedX Corp. stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at \$0.0430 and \$0.0358. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on Tuesday, June 11, 2024, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Some negative signals were issued as well, and these may have some influence on the near short-term development. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

On the downside, the stock finds support just below today's level from accumulated volume at \$0.0370 and \$0.0350. On the upside the stock meets some resistance just above today's level from accumulated volume at \$0.0440, \$0.0450 and \$0.0480.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock During the last day, the stock moved \$0 between high and low, or 0%. For the last week the stock has had daily average volatility of 0%

Cell MedX Corp. holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this stock since the last evaluation from a Buy to a Hold/Accumulate candidate.

Risk: Low

Evaluation: Hold/Accumulate
