The stock lies in the middle of a wide and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the stock is expected to rise **2.79%** during the next 3 months and, with a 90% probability hold a price between **\$18.97** and **\$21.33** at the end of this 3-month period.

The **Columbia Banking System** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. On corrections down, there will be some support from the lines at **\$19.37** and **\$19.16**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Tuesday, June 04, 2024**, and so far it has risen 7.06%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. Volume fell together with the price during the last trading day and this reduces the overall risk as volume should follow the price movements.

Columbia Banking System finds support from accumulated volume at \$19.01 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$19.83**, **\$19.89** and **\$20.17**.
