MACD: Buy

## Tech commentaries:

No changes to the price of **Cooper Metals Limited** stock on the last trading day (Friday, 28th Jun 2024). During the last trading day the stock fluctuated 1.43% from a day low at **\$0.0700** to a day high of **\$0.0710**. The price has been going up and down for this period, and there has been a -6.67% loss for the last 2 weeks.

The stock lies in the lower of a very wide and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at **\$0.0587** is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the stock is expected to fall **-30.52%** during the next 3 months and, with a 90% probability hold a price between **\$0.0408** and **\$0.0828** at the end of this 3-month period.

A buy signal was issued from a pivot bottom point on **Friday, June 21, 2024**, and so far it has risen 11.11%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Cooper Metals Limited** stock holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the stock giving a more negative forecast for the stock. On further gains, the stock will meet resistance from the long-term Moving Average at **\$0.0962**. On a fall, the stock will find some support from the short-term average at **\$0.0673**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

**Cooper Metals Limited** finds support from accumulated volume at **\$0.0690** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$0.0710**, **\$0.0780** and **\$0.0840**.

This stock may move very much during the day (volatility) and with periodic low trading volume this stock is considered to be "very high risk". During the last day, the stock moved **\$0.0010** between high and low, or **1.43%**. For the last week the stock has had daily average volatility of **5.38%**.

**Cooper Metals Limited** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this stock.

**Risk: Very High**

**Evaluation: Sell Candidate**
