## Tech commentaries:

The **CreditRiskMonitor.com, Inc.** stock price gained **0.94%** on the last trading day (Monday, 3rd Jun 2024), rising from **\$2.13** to **\$2.15**. It has now gained 4 days in a row. It will be exciting to see whether it manages to continue gaining or take a minor break for the next few days. During the last trading day the stock fluctuated **1.18%** from a day low at **\$2.13** to a day high of **\$2.15**. The price has been going up and down for this period, and there has been a 2.38% gain for the last 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **60** more shares were traded than the day before. In total, **260** shares were bought and sold for approximately **\$559.00**.

The stock has broken the falling short-term trend up. Firstly a slower falling rate is indicated, but this may very well be an early signal of a trend shift. On the reaction, there will be support on the roof of the current trend broken, which is **\$2.13**, a level that may pose a second chance to hit a runner. According to fan-theory **\$2.27** will be the next possible trend-top level and thereby pose a resistance level that may not be broken at the first attempt.

Mostly positive signals in the chart today. The **CreditRiskMonitor.com, Inc.** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock, but the stock has a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections down, there will be some support from the lines at **\$2.09** and **\$2.09**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Tuesday, May 28, 2024**, and so far it has risen 7.50%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **CreditRiskMonitor.com, Inc.** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. The very low volume increases the risk and reduces the other technical signals issued.

**CreditRiskMonitor.com, Inc.** finds support from accumulated volume at **\$2.10** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the stock meets some resistance just above today's level from accumulated volume at **\$2.16**, **\$2.19** and **\$2.20**.

This stock is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the stock moved **\$0.0250 (1.18%)** between high and low. For the last week, the stock has had daily average volatility of **1.77%**.

Several short-term signals are positive and the break-up from the falling trend indicates a possible shift for a trend. We believe that the prices around the breaking point will indicate particularly good levels, but we also believe that the current level will hold a possible good buy level for the short-term period. We have upgraded our analysis conclusion for this stock since the last evaluation from a Hold/Accumulate to a Buy candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
