The ETF lies in the middle of a weak rising trend in the short term and a further rise within the trend is signaled. The **Ishares Core S&p 500 Ucits Etf Usd (acc)** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$577.67** and **\$563.63**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Monday, April 22, 2024**, and so far it has risen 10.73%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

Ishares Core S&p 500 Ucits Etf Usd (acc) finds support from accumulated volume at \$576.44 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. There is no resistance from accumulated volume above today's level and given the right condition the ETF may perform very well during the next couple of days.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$44.57** between high and low, or **7.70%**. For the last week the ETF has had daily average volatility of **3.54%**.

Ishares Core S&p 500 Ucits Etf Usd (acc) holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.
