Tech commentaries:

The **CertiK / US Dollar** cryptocurrency price gained **4.43%** on the last trading day (Sunday, 12th May 2024), rising from **\$0.648** to **\$0.677**. During the last trading day the cryptocurrency fluctuated **4.88%** from a day low at **\$0.655** to a day high of **\$0.687**. The price has risen in 6 of the last 10 days and is up by **2.27%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **146 thousand** more shares were traded than the day before. In total, **881 thousand** shares were bought and sold for approximately **\$596.17 thousand**.

The cryptocurrency lies in the lower of a very wide and falling trend in the short term, and this may normally pose a very good buying opportunity. If the lower trend floor at \$0.631 is broken, it will firstly indicate a stronger fall rate. Given the current short-term trend, the cryptocurrency is expected to fall **-9.35%** during the next 3 months and, with a 90% probability hold a price between **\$0.572** and **\$0.90** at the end of this 3-month period.

There are mixed signals in the cryptocurrency today. The **CertiK / US Dollar** cryptocurrency holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$0.678** and **\$0.739**. A break-up above any of these levels will issue buy signals. A buy signal was issued from a pivot bottom point on **Wednesday, May 01, 2024**, and so far it has risen 5.13%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). **CertiK / US Dollar** has increased volume and follows the last lift in the price. This is considered to be a technical positive sign as volume should follow the price-formation. Higher liquidity also reduces the general risk.

CertiK / US Dollar finds support from accumulated volume at \$0.675 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the cryptocurrency meets some resistance just above today's level from accumulated volume at **\$0.696**, **\$0.794** and **\$0.798**.

This cryptocurrency has average movements during the day and with good trading volume, the risk is considered to be medium. During the last day, the cryptocurrency moved **\$0.0320** between high and low, or **4.88%**. For the last week, the cryptocurrency has had daily average volatility of **5.46%**.

CertiK / US Dollar holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this cryptocurrency.

Risk: **Medium**

Evaluation: **Sell Candidate**
