## Tech commentaries:

No changes to the price of **Curzon Energy Plc** stock on the last trading day (Wednesday, 2nd Sep 2020). During the last trading day the stock fluctuated **0%** from a day low at **£0.0100** to a day high of **£0.0100**. The price has been going up and down for this period, and there has been a 0% change for the last 2 weeks.

The stock has broken the narrow and horizontal trend up. Breaks like this are often followed by swift and strong movements, and any correction down to the breakline at approximately **£0** is considered to be a "second chance" to hit a potential runner. It is, however, important that volume does follow the price as false breaks may appear and it may move back into the horizontal trend. Based on the rectangle-formation theory the stock is predicted to reach **£0** sometime during the next 3 months.

The **Curzon Energy Plc** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **£0.0100** and **£0.0085**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, November 30, -1**. Further fall is indicated until a new bottom pivot has been found. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued.

There is no support from accumulated volume below today's level and given the right condition the stock may perform very badly in the next couple of days. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

In general the stock tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the stock. During the last day, the stock moved **£0** between high and low, or **0%**. For the last week the stock has had daily average volatility of **0%**.

**Curzon Energy Plc** holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

**Risk:** **Low**

**Evaluation:** **Hold/Accumulate**
