Volume: Buy  
MACD: Sell

## Tech commentaries:

The **L&g Dax Daily 2x Short Ucits Etf** ETF price fell by **-2.58%** on the last day (Wednesday, 3rd Jul 2024) from **1.10€** to **1.07€**. During the last trading day the ETF fluctuated **1.14%** from a day low at **1.07€** to a day high of **1.08€**. The price has fallen in 6 of the last 10 days and is down by **-2.26%** for this period. Volume has increased on the last day by **42 thousand** shares but on falling prices. This may be an early warning and the risk will be increased slightly over the next couple of days. In total, **46** thousand shares were bought and sold for approximately **49.38€** thousand.

The ETF is moving within a wide and horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **L&g Dax Daily 2x Short Ucits Etf** ETF with a 90% probability to be traded between 0.97€ and 1.09€ at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFS seldom manage to go directly from the bottom of a trend up to the top. ETFS turning up in the middle of a horizontal trend are therefore considered to be potential runners.

The **L&g Dax Daily 2x Short Ucits Etf** ETF holds a sell signal from the short-term Moving Average; at the same time, however, there is a buy signal from the long-term average. Since the short-term average is above the long-term average there is a general buy signal in the ETF giving a positive forecast for the stock. On further gains, the ETF will meet resistance from the short-term Moving Average at approximately **1.09€**. On a fall, the ETF will find some support from the long-term average at approximately **1.06€**. A break-up through the short-term average will send a buy signal, whereas a breakdown through the long-term average will send a sell signal. Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Monday, June 17, 2024**, and so far it has fallen -3.18%. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). **L&g Dax Daily 2x Short Ucits Etf** gained volume on the last day, but on falling prices. In technical terms, this is called divergence and may be an early warning. In some cases, increasing volume on falling prices may be considered positive, but that is mainly in typical "sell-offs". The very low volume increases the risk and reduces the other technical signals issued.

**L&g Dax Daily 2x Short Ucits Etf** finds support from accumulated volume at 1.07€ and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **1.08€**, **1.09€** and **1.09€**.

This ETF is usually traded at a good volume, and with minor daily changes, the risk is considered to be low. During the last day, the ETF moved **0.0122€ (1.14%)** between high and low. For the last week, the ETF has had daily average volatility of **1.02%**.

**L&g Dax Daily 2x Short Ucits Etf** holds several negative signals and is within a wide and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF. Due to some small weaknesses in the technical picture we have downgraded our analysis conclusion for this ETF since the last evaluation from a Hold/Accumulate to a Sell candidate.
