Tech commentaries:

The **Ft Cboe Vest U.s. Equity Deep Buffer Etf** ETF price fell by **-0.0991%** on the last day (Friday, 28th Jun 2024) from **\$40.37** to **\$40.33**. During the last trading day the ETF fluctuated **0.471%** from a day low at **\$40.33** to a day high of **\$40.52**. The price has been going up and down for this period, and there has been a 0.55% gain for the last 2 weeks. Volume fell on the last day along with the ETF, which is actually a good sign as volume should follow the ETF. On the last day, the trading volume fell by **-6 thousand** shares and in total, **14 thousand** shares were bought and sold for approximately **\$552.92** thousand.

The ETF lies in the middle of a narrow and weak rising trend in the short term and a further rise within the trend is signaled. Given the current short-term trend, the ETF is expected to rise **2.80%** during the next 3 months and, with a 90% probability hold a price between **\$41.35** and **\$41.84** at the end of this 3-month period.

The **Ft Cboe Vest U.s. Equity Deep Buffer Etf** ETF holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$40.31** and **\$39.94**. A breakdown below any of these levels will issue sell signals. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. A sell signal was issued from a pivot top point on **Tuesday, June 18, 2024**, and so far it has fallen - 0.112%. Further fall is indicated until a new bottom pivot has been found. Volume fell along with the price during the last trading day, which is technical positive. One should, however, note that this ETF may have low liquidity in periods, which increases the general risk.

Ft Cboe Vest U.s. Equity Deep Buffer Etf finds support from accumulated volume at \$40.13 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$40.34**, **\$40.37** and **\$40.38**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0.190** between high and low, or **0.471%**. For the last week the ETF has had daily average volatility of **0.269%**

Ft Cboe Vest U.s. Equity Deep Buffer Etf holds several positive signals, but we still don't find these to be enough for a buy candidate. At the current level, it should be considered as a hold candidate (hold or accumulate) in this position whilst awaiting further development.

Risk: **Low**

Evaluation: **Hold/Accumulate**
