## Tech commentaries:

The **Dimensional Us Marketwide Value Etf** ETF price gained **0.538%** on the last trading day (Friday, 28th Jun 2024), rising from **\$39.06** to **\$39.27**. During the last trading day the ETF fluctuated **0.95%** from a day low at **\$39.12** to a day high of **\$39.49**. The price has fallen in 6 of the last 10 days but is still up by **0.51%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **7 thousand** more shares were traded than the day before. In total, **177 thousand** shares were bought and sold for approximately **\$6.97 million**.

The ETFs at the upper part of a narrow and horizontal trend and normally this may pose a good selling opportunity but a break-up through the top trend line at **\$39.33** will give a strong buy signal and a trend shift could be expected. Given the current horizontal trend, you can expect **Dimensional Us Marketwide Value Etf** ETF with a 90% probability to be traded between **\$37.87** and **\$38.67** at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

There are mixed signals in the ETF today. The **Dimensional Us Marketwide Value Etf** ETF holds a buy signal from the short-term Moving Average; at the same time, however, the long-term average holds a general sell signal. Since the longterm average is above the short-term average there is a general sell signal in the ETF giving a more negative forecast for the stock. On further gains, the ETF will meet resistance from the long-term Moving Average at **\$39.34**. On a fall, the ETF will find some support from the short-term average at **\$39.19**. A break-up through the long-term average will give another buy signal, while a fall below the short-term average will add another sell signal and strengthen the general signal. A sell signal was issued from a pivot top point on **Monday, June 24, 2024**, and so far it has fallen **-0.431%**. Further fall is indicated until a new bottom pivot has been found. Furthermore, there is currently a sell signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

**Dimensional Us Marketwide Value Etf** finds support from accumulated volume at **\$39.21** and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$39.44**, **\$39.63** and **\$40.02**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.370** between high and low, or **0.95%**. For the last week the ETF has had daily average volatility of **0.791%**.

**Dimensional Us Marketwide Value Etf** holds several negative signals and we believe that it will still perform weakly in the next couple of days or weeks. We, therefore, hold a negative evaluation of this ETF.

Risk: **Low**
