MACD: Buy

## Tech commentaries:

No changes to the price of **ALPS Disruptive Technologies** ETF on the last trading day (Tuesday, 25th Jun 2024). During the last trading day the ETF fluctuated **0%** from a day low at **\$41.00** to a day high of **\$41.00**. The price has fallen in 6 of the last 10 days and is down by **-1.54%** for this period.

The ETF is moving within a horizontal trend and further movements within this trend can be expected. Given the current horizontal trend, you can expect **ALPS Disruptive Technologies** ETF with a 90% probability to be traded between \$40.17 and \$44.02 at the end of this 3-month period. A break of a horizontal trend is often followed by a large increase in the volume, and ETFs seldom manage to go directly from the bottom of a trend up to the top. ETFs turning up in the middle of a horizontal trend are therefore considered to be potential runners.

There are mixed signals in the ETF today. The **ALPS Disruptive Technologies** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. Also, there is a general sell signal from the relation between the two signals where the long-term average is above the short-term average. On corrections up, there will be some resistance from the lines at **\$41.11** and **\$41.74**. A break-up above any of these levels will issue buy signals. Volume fell on the last day without any changes to the price. This does not cause any direct divergence but may be an early warning and a possible "turning point". The very low volume increases the risk and reduces the other technical signals issued. A buy signal was issued from a pivot bottom point on **Monday, June 24, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD).

**ALPS Disruptive Technologies** finds support from accumulated volume at \$39.73 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$41.03**, **\$41.26** and **\$41.45**.

In general the ETF tends to have very controlled movements and therefore the general risk is considered very low. However, be aware of low or falling volume and make sure to keep an eye on the ETF During the last day, the ETF moved **\$0** between high and low, or **0%**. For the last week the ETF has had daily average volatility of **0.358%**

Several short-term signals are positive and we conclude that the current level may hold a buying opportunity, as there is a fair chance for **ALPS Disruptive Technologies** ETF to perform well in the short-term period. We have upgraded our analysis conclusion for this ETF since the last evaluation from a Sell to a Buy candidate.

Risk: **Low**

Evaluation: **Buy Candidate**
